

Over 1 million marine animals (including mammals, fish, sharks, turtles, and birds) are killed each year due to plastic debris in the ocean (UNESCO). Be sure to properly dispose of all waste while enjoying marine life.

Ahhh! A shark ate Clark! Although we might not be happy with this particular shark, sharks are a healthy part of the ocean ecosystem and must be protected. Sharks are uniquely targeted and hunted by humans for use in shark fin soup.

Clark suffered cardiac arrest due to the oil his gills took in from an oil spill! The National Wildlife Federation estimates that 2-5 million fish were killed by the 2010 BP Deepwater Horizon oil spill, among other marine life.

Although illegal, thousands of tons of aquarium fish and fish for food are caught with cyanide every year. In addition to killing and incapacitating fish, cyanide fishing contaminates it and bleaches neighboring coral.

Bottom trawling is one of many illegal commercial fishing tactics. It involves towing a weighted net along the seafloor to round up and catch fish, simultaneously destroying everything in its path, including coral and other marine life.

Blast fishing is an illegal fishing technique where dynamite is used to send shock waves that stun and kill all life in its path. Blast fishing can turn thriving coral ecosystems to rubble.

Due to widespread pollution, there's not enough food, and Clark ran out of energy :( To go farther, upgrade Clark's energy!
